

Cremina SL

Tradition and Innovation

Cremina SL is the perfect lever-espresso machine with a big extra

- Classic swiss design
- Made from the best materials
- Spring loaded group head

The Cremina SL combines the tranquility of a hand lever machine with the simplicity of a semi-automatic machine. If you have a soft spot for purely mechanical extraction and do not want to leave constant quality to chance, the Cremina SL is the right choice.

The completely redesigned brewing group paired with the solid base of the Cremina give it a unique appearance. Never before a brew group with compression spring has been used on such a compact machine.

With each extraction you can experience how the lever moves constantly and slowly upwards, magically, while a perfect espresso flows into your cup below.
